Preliminary remark on Impact Factor (IF): the number of scientific review on ageing in the domain of social and preventive medicine or public health with an *impact factor* (IF) is relatively small or rated very low. Ageing is an interdisciplinary domain which by essence has developed contributions at many other levels to serve best policy and teaching such as books, documents for government agencies or policy documents which is reflected by the list of reference below.

Other indicators in social science, demography, health and policy are today cited such as Harzing, A.W. (2007) *Publish or Perish*, available from <http://www.harzing.com/pop.htm>.

² The Author impact analysis objective is to perform an analysis of the impact of an author's publications. This page contains the minimum parameters that are necessary to look up an author's publications on Google Scholar. Publish or Perish uses these parameters to perform an Advanced Scholar Search query, which is then analyzed and converted to a number of statistics. Publish or Perish calculates the following citation metrics: Total number of papers, Total number of citations, Average number of citations per paper, Average number of citations per author, Average number of papers per author, Hirsch's h-index and related parameters, shown as h-index and Hirsch a=y.yy, m=z.zz in the output. Also Zhang's e-index., Egghe's g-index, shown as g-index in the output, The [contemporary h-index](#), shown as hc-index and ac=y.yy in the output, Three variations of the [individual h-index](#), shown as hI-index, hI,norm, and hm-index in the output, The [age-weighted citation rate](#), An analysis of the number of authors per paper. - See website for more details: <http://www.harzing.com/pop.htm>
